

Weather Characteristics of Mountain Flying

Weather is among the most important elements in the go/no go decision for flying. You can't have too much weather education.

Many a pilot has ventured into the cumulo-granite west of Denver and found an unfortunate end. Mountain flying is like none other, with various wind and weather patterns that require careful study.

Michael Cetinich of Jeppesen will provide us with valuable information about weather phenomena to be careful of as we pursue flight over those wonderful Rockies. He is sure to include an accident review to make his point.

Directions: From I-25 and E. Arapahoe Rd., proceed east to S. Peoria St. Turn right. At the entrance to Centennial Airport, turn right. Continue around the control tower. Turn right just past the yellow CAUTION sign. In the Arapahoe Aero building.

A message from the National FAASTeam Manager

Over 10,150 AMTs earned an AMT Award last year. Will you, this year?

Sign up for the FAA's safety services at www.FAASafety.gov!
